

# PYROTEK SPLASH GUARDS

## IN-LINE DEGASSING

Pyrotek Splash Guards protect the shaft and degassing system connections from molten aluminium splash in in-line degassing operations. The guards are made from either ZX-grade graphite, which has twice the oxidation resistance of standard graphite, or from vacuum formed ceramic fibre coated with non-wetting boron nitride.

### BENEFITS

- Long product life
- Effective molten aluminium protection
- Good mechanical properties

### APPLICATIONS

In-line degassing systems

### AVAILABILITY

- Vendor-managed inventory (VMI) available
- Custom designs are available to meet specific project requirements
- ZX-grade graphite or vacuum formed ceramic fibre options
