

# PHOSPHORUS COPPER SHOT

## METAL ADDITIVE

Pyrotek Phosphorus Copper Shot effectively removes oxygen from molten metal and improves metal casting fluidity. The 10 mesh shot is 15 percent phosphorus and dissolves quickly in copper, brass and bronze. Phosphorus Copper Shot is also effective for silicon modification in hypereutectic alloys containing copper and over 11.5 percent silicon.

For best results and reduced waste, add the shots to molten metal in small quantities and repeat if necessary.

## BENEFITS

- Eliminates gas porosity
- Improves molten metal fluidity

## APPLICATIONS

- Deoxidation
- Silicon modification

## AVAILABILITY

113 g–2 kg (4 oz–4 lbs) packets
